

AbaGastro ●

The software for the hotel and restaurant industry

The Abacus industry solution for the hospitality industry reduces the administrative and organisational effort and simplifies your everyday work.

AbaGastro digitally maps central processes, automates them wherever possible and saves you time and money. The networked software means that all data is recorded only once and automatically posted, resulting in efficiency in all processes.

All your needs met

Abacus meets the needs of small, medium and large catering companies. The Swiss21 platform and the entire Abacus application universe are available for this purpose. An ideal and tailor-made solution is created for you using a combination of products from the Abacus universe and Swiss21 in addition to the solutions from our industry-leading partners.

Integrated personnel resource planning

From legally compliant personnel planning and time recording to payroll accounting and booking in financial accounting, media discontinuity is no longer a problem. The integrated approach of Abacus relieves you of double entries and isolated applications and saves you a considerable amount of time. Reports are used to visually present the company data in a clear manner, so that AbaGastro can also be used as a management tool.

Our partners Lightspeed, Paulis Kitchen and Saviva perfectly complement the Abacus portfolio for your company.
