

LawLite●

The standard software for small law firms
with up to four employees

Where small law firms meet innovation

LawLite is based on the AbaLaw software and is designed to meet the needs of small law firms with up to four employees.

Issue mandates

In the initial meeting with the customer, the order and fee are agreed transparently and all necessary documents are signed thanks to electronically qualified signatures with DeepSign. Onboarding is completely digital, while activity management with deadlines, appointments and tasks ensures that everything runs smoothly.

Mandate Management

With the digital client dossier and electronic document exchange, you can keep all mandates, deadlines and activities under control at all times. Mobile and flexible service and expense recording, digital communication channels with automatic filing and the integration of Office 365, an interface to Octoior and Justitia 4.0, ensure efficient work processes. AI functions based on Abacus Intelligence make your day-to-day work even easier.

Mandate-orientated time and service recording

With integrated time and service recording, you can *invoice your services quickly, easily and in line with your mandate.

Invoicing

Invoicing customers and courts is simple and flexible. It is possible to customise the invoice in Word.

Mandate controlling

With comprehensive controlling, you can always keep an eye on important KPIs such as the contribution margin. You receive an overview of current mandates, outstanding services and expenses at all times. Do you urgently need an important KPI? Abacus Intelligence provides you with interactive analyses and key figures at the touch of a button.

Become a digital champion

With LawLite, you and your small law firm are optimally equipped for the advancing digitalisation in the legal sector.

All with one software

From mandate issue to service entry to invoicing.

Interactive collaboration

Secure, simple and digital collaboration with clients and authorities.

Consistently digital and standardised processes

From onboarding to document exchange and invoicing to communication.

Swiss data protection standard and secure Cloud technology

The data is transport-encrypted. The hosting solution servers are located in an ISO 27001:2022-certified data centre.
