

# Fleet Management.

The software for managing vehicles

Organize the acquisition and operation of all vehicles with Abacus Fleet Management.

Manage your vehicles efficiently and reduce the total costs of your fleet. Maintain an overview of your vehicle fleet, recognise necessary expenditures at an early stage and immediately identify excessive fuel consumption or outliers in repair costs. The Fleet Management solution from Abacus was developed together with the Swiss company fleetcompetence Group Schweiz and can be embedded in the existing ERP landscape.

#### Maintain an overview

With Abacus Fleet Management, all current data on your vehicle fleet is always available online. Analyse repairs, service costs, maintenance costs and fuel consumption. With integrated controlling, you always know the most important key figures of your fleet, such as the costs per kilometre or the fuel consumption per 100 kilometres.

#### Make decisions based on facts

Abacus Fleet Management increases planning reliability for your company and helps with decisions on new or replacement purchases or the cost-effectiveness of repairs. As a result, it represents a strategic management tool that can be used to optimise your fleet costs.

# Fleet Management at a glance

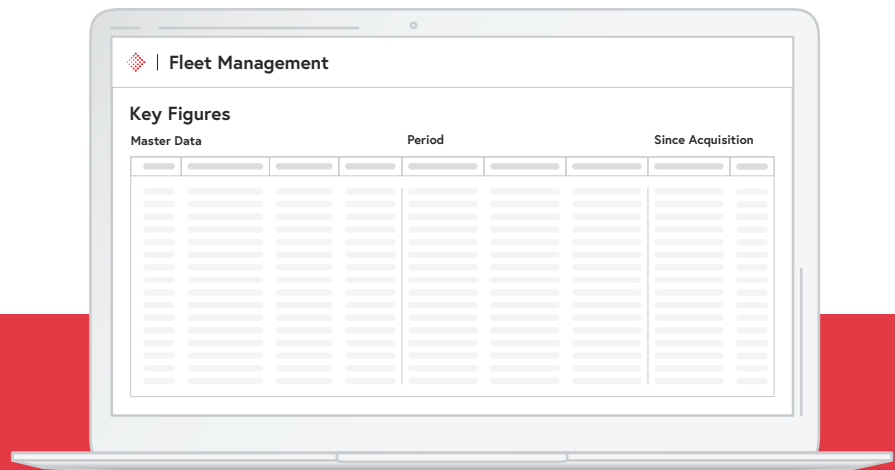

## Master data and transactions

- Comprehensive vehicle database with e-dossier
- Vehicle history
- Depreciation
- Repairs
- Service
- Driver
- Import refuellings
